Series PM175 Powermeter and Power Quality Analyzer

DNP3 Communications Protocol

Reference Guide

BG0448 Rev. A1

Every effort has been made to ensure that the material herein is complete and accurate. However, the manufacturer is not responsible for any mistakes in printing or faulty instructions contained in this book. Notification of any errors or misprints will be received with appreciation.

For further information regarding a particular installation, operation or maintenance of equipment, contact the manufacturer or your local representative or distributor.

REVISION HISTORY

Rev.A1 (F/W Version 25.2.1 or later):

Initial release.

Table of Contents

1 General

This document specifies a subset of the DNP3 communications protocol used to transfer data between a master computer station and the PM175. The document provides the complete information necessary to develop third-party communications software capable of communication with the Series PM175 instruments. Additional information concerning communications operation, configuring the communications parameters, and communications connections is found in "Series PM175 Powermeter and Power Quality Analyzer, Installation and Operation Manual".

IMPORTANT

1. In 3-wire connection schemes, the unbalanced current and phase readings for power factor, active power, and reactive power will be zeros, because they have no meaning. Only the total three-phase power values will be shown.
2. Most of the advanced features are configured using multiple setup parameters that can be accessed in a number of contiguous registers. When writing the setup registers, it is recommended to write all the registers at once using a single request, or to clear (zero) the setup before writing into separate registers.

2 DNP 3.0 Protocol Implementation

DNP3 (Distributed Network Protocol) is an open standard designed by Harris Control Division. DNP defines a command-response method of communicating digital information between a master and slave device. Detailed information regarding DNP3 is available in the "Basic 4 Document Set" which can be obtained from the DNP User Group.

2.1 Deviations from Standard

The PM175 implements Level 2 of the DNP3 communication protocol. The device does not support unsolicited responses or hardware collision avoidance.

The data link layer differs from the Basic 4 specifications because of the master-slave relationship between devices. When the device receives a request, no further requests can be sent until after the device makes the appropriate response.

2.2 DNP Implementation

The PM175, like most devices, allows retrieving regular analog and binary data from the device by executing directed (non-broadcast) Read requests.

Binary-Output-Status objects and Analog-Output-Status objects are sent with flags that always indicate ONLINE.

A Binary-Output-Status object that indicates the current state of a control digital point (relay) uses remote forced data as well as local forced data bits. The value of a state bit indicates the current state of the digital output point.

The PM175 executes the parameter clear function and demands resets using the Direct-Operate, SBO/Operate or Direct-Operate-No-Acknowledge command to specified points of the Control-Relay-Output-Block object.

Issuing the Direct-Operate, SBO/Operate or Direct-Operate-No-Acknowledge command to appropriative points of the Analog-Output-Block object can change the setup parameters. The device also supports the DNP functions Write, Cold-Restart and Delay Measurement.

Refer to Appendix A for specific requests and responses. Appendix B contains the standard DNP Device Profile Document.

The device attempts to respond with the same object variation and qualifier as those in the request. Exceptions to this rule include changing variation 0 to a specific variation and changing qualifier code 6 to 1.

If the device receives an invalid request, it sets the internal indication to the error code. The following internal indication bits are supported:

Octet Position	Bit Position	Description
0	0	Set when a request received with a broadcast destination address. Cleared after next response.
0	7	Device restart - set when the device powers up or after executing Cold Restart, cleared by writing zero to object 80.
0	4	Time-synchronization required from the master. Cleared when master sets the time.
0	5	Set when the device is in the Local state. Cleared when the device in the Remote state.
1	5	Set when the current configuration in the device is corrupted. May also be set as a result of the legal changes in the setup configuration whenever another setup is affected by the changes made. Cleared by writing zero to points 64-75 using object 12.

2.2.1 Device Address

Each device on a DNP link must have a unique address. The PM175 allows a device address in the range of 0 to 65532 to be selected. The DNP master can use addresses 65533 to 65535 for broadcast requests. A broadcast request never generates a DNP response.

2.2.2 Transaction Timing

The PM175 response time to master requests is indicated in Table 2-1.

Table 2-1 Response Time

Baud Rate, bps	Response Time, ms		
	Min	Max	Typical
9600	13	15	13
19200	11	12	11
57600	9	10	9
115200	9	10	9

The Direct-Operate, SBO/Operate or Direct-Operate-No-Acknowledge requests for reset/clear registers and setpoint changing are immediately confirmed.

2.2.3 Class 0 Response

The PM175 DNP implementation supports a wide variety of messages. The most common method of getting static object information from the meter via DNP is to issue a read Class 0 request.

The PM175 allows you to configure the Class 0 response by assigning ranges of points to be polled via Class 0 requests (see Section 3.9, DNP Protocol setup). The Class 0 point list may contain up to 32 ranges of points. The total number of points that can be reported in the Class 0 response is limited by the one application fragment size, or 2048 bytes.

2.2.4 Frozen Counters

The PM175 supports function codes 7 “Immediate Freeze”, 8 “Immediate Freeze – No Acknowledgment ”, 9 “Freeze with Clear” and 10 “Freeze with Clear – No Acknowledgment” for Binary Counter object 20.

The freeze command copies the Binary Counter points listed in Section 3.4 to a freeze buffer with the time of freeze. All Binary Counter points are frozen together. Since the freeze command may request clearing counters, the device uses a single freeze buffer that is shared among all communication ports and TCP/IP connection sockets so that issuing a freeze command via a number of connections may cause unpredictable results.

The objects that were frozen can be requested by asking for 16-bit or 32-bit Frozen Counter objects with any variation listed in the device profile (see Appendix D), with the time of freeze or without time. 16-bit Frozen Counter objects may be scaled to avoid over-range errors if this option is enabled in the device (see Section 2.2.7, Scaling 16-bit Binary Counters).

The response contains the last frozen values of the corresponding Binary Counter points. Frozen Counters requested with variation 0 are responded with the default variation specified for the Frozen Counter object in the DNP Options Setup (see Section 3.9, DNP Protocol setup).

2.2.5 Event Objects

The PM175 allows you to assign any static object point to a predefined object change event point for Class 1, Class 2 or Class 3 event polling. A total of 64 change event points are available. You can assign any of the Analog Input, Binary Input or Binary Counter static points to the corresponding change event point through the DNP Event setup (see Section 3.9). You can also link any point to Class 1, Class 2 or Class 3 object polling.

By default, a change event point index is the same as for the corresponding static object point. The PM175 gives you an option to re-map a static point index for the corresponding event point starting with index 0, separately for each object type - Analog Input, Binary Input or Binary Counter change events. For example, if the re-mapping option is active and you first assign static point AI:23 (1-sec frequency) to an event Class 1 point, the corresponding Analog Input change event point will be identified as point 0 in the Class 1 poll response.

Each point assigned to an event class can be separately enabled or disabled for scanning. Each point can also be linked to the common device Event log so that each change would be recorded to the Event log under common Setpoint #17.

The conditions for Analog Input change events can be specified by either an operating threshold, or a deadband, using one of the following three relations:

Delta – a new event is generated when the absolute value of the difference between the last reported value of the point and its current value exceeds the specified deadband value;

More than (Over) - a new event is generated when the point value rises over the specified threshold, and then when the point value returns below the threshold taking into consideration a predefined hysteresis;

Less than (Under) - a new event is generated when the point value drops below the specified threshold, and then when the point value returns above the threshold taking into consideration a predefined hysteresis.

For Binary Counter and Binary Input change events, a Delta relation is only applicable.

The number of event points for each object type (Analog Input, Binary Input or Binary Counter) is limited through the DNP Options setup (see Section 3.9). Every time you change the number of points for any of the objects, the device clears all event buffers and links the default set of static points to each event object type.

The scan time rates for polling events of different types are as follows:

- 1 cycle for Binary Input points
- 200 ms for Binary Counter and Analog Input points

The memory consumption for keeping events depends on the event objects variation, or DNP object size. For each event object type and event class, the device uses a separate buffer. The maximum buffer size (MBS) per DNP event object/event class is 512 bytes. The maximum number of events per class that the device can hold can be calculated as follows:

Maximum number of events = MBS/(DNP Event Object Size + 1)

For example, the device can hold up to 512/12=40 measures of the 32-bit Analog change event with Time objects, or up to 512/8=64 measures of the 8-bit Binary change event with Time objects.

To disable change event objects, explicitly set all registers that specify the number of the Analog Input, Binary Input and Binary Counter objects to generate events to 0. In this case, the device will support only static objects.

2.2.6 Scaling 16-bit Analog Inputs

Any of the variations 1 through 4 can be used with the Analog Input objects. Variations specified in Sections 3.1 and 3.5 show those that can be used to read a full-range value without a possible over-range error when no scaling is used to accommodate the value to the requested object size.

When over-range occurs, a positive value is reported as 32767 and a negative value as -32768, with the over-range bit in the flag octet being set to 1 if a variation 2 is requested. To avoid over-range errors when a variation 2 or 4 is required, a liner scaling may be used to scale 32-bit analog readings to 16-bit Analog Input objects (see Section 3.9, DNP Options setup). Scaling is enabled in the device by default.

When scaling is enabled, any analog input requested with variation 2 or 4 will be scaled to the range of -32768 to 32767 for bi-directional parameters (such as power and power factor), and to the range of 0 to 32767 for single-ended positive parameters (voltage, current, frequency, etc.). To get a true reading, the reverse conversion should be done using the following formula:

$$Y = ((X – DNP\_LO) \times (HI - LO)) /(DNP\_HI – DNP\_LO) + LO$$

where:

Y	-	True reading in engineering units
X	-	Raw input data in the range of DNP_LO – DNP_HI
LO, HI	-	Data low and high scales in engineering units (for device data scales, see Section 4)
DNP_LO	-	DNP low conversion scale: DNP_LO = -32768 for a point with a negative LO scale DNP_LO = 0 for a point with a zero or positive LO scale
DNP_HI	-	DNP high conversion scale: DNP_HI = 32767

EXAMPLE

If you have read a value of 201 for point AI:3 that shows the I1 current (see Section 3.1) and the CT primary current is 200A (the high current scale is 2×200 = 400A), then the current reading in engineering units is as follows:

$(201 - 0) \times (400 - 0)/(32767 - 0) + 0 = 2.45A$

2.2.7 Scaling 16-bit Binary Counters

Binary counters are stored in the device in 32-bit integer format. Using 16-bit Binary Counter objects can cause over-range errors if the counter value exceeds 32767. Scaling binary counters (see DNP Options setup in Section 3.9) allows changing a binary counter unit from 1 to 1000 in powers of 10 to accommodate a 32-bit counter value to 16-bit object format. If the scaling unit is greater than 1, the counter value is reported being divided by the scaling unit. To get the actual value, multiply the counter reading by the selected scaling unit.

2.3 Password Protection

The PM175 has a password protection option allowing you to protect your setups, cumulative registers and logs from being changed or cleared through communications. You can disable or enable password protection through communications or via the front display. For details, refer to your instrument Installation and Operation Manual. When password protection is enabled, the user password you set in your instrument should be written into the device authorization register (point AO:192) before another write request is issued. If the correct password is not supplied while password protection is enabled, the instrument will respond to all write requests with the exception response "Control operation not supported for this point". It is recommended to clear the password register after you have completed your changes in order to activate password protection.

3 DNP Point Map

3.1 Analog Inputs - Basic Set

Object : Var.	Object : Point	Description	Options/Range[2]	Units[2]	Type	R/W	Notes
30:3	AI:0	V1/V12 Voltage	0-Vmax	U1	UINT32	R	[1]
30:3	AI:1	V2/V23 Voltage	0-Vmax	U1	UINT32	R	[1]
30:3	AI:2	V3/V31 Voltage	0-Vmax	U1	UINT32	R	[1]
30:3	AI:3	I1 Current	0-Imax	U2	UINT32	R	
30:3	AI:4	I2 Current	0-Imax	U2	UINT32	R	
30:3	AI:5	I3 Current	0-Imax	U2	UINT32	R	
30:3	AI:6	kW L1	-Pmax-Pmax	U3	INT32	R

30:4	AI:15	Power factor L1	-1000-1000	×0.001	INT16	R	
30:4	AI:16	Power factor L2	-1000-1000	×0.001	INT16	R	
30:4	AI:17	Power factor L3	-1000-1000	×0.001	INT16	R	
30:4	AI:18	Total PF	-1000-1000	×0.001	INT16	R	
30:3	AI:19	Total kW	-Pmax-Pmax	U3	INT32	R	
30:3	AI:20	Total kvar	-Pmax-Pmax	U3	INT32	R	
30:3	AI:21	Total kVA	0-Pmax	U3	UINT32	R	
30:3	AI:22	In (neutral) Current	0-Imax	U2	UINT32	R	
30:4	AI:23	Frequency	0-Fmax	×0.01Hz	UINT16	R	
30:3	AI:24	Maximum kW import sliding window demand	0-Pmax	U3	UINT32	R	
30:3	AI:25	kW import accumulated demand	0-Pmax	U3	UINT32	R	
30:3	AI:26	Maximum kVA sliding window demand	0-Pmax	U3	UINT32	R	
30:3	AI:27	kVA accumulated demand	0-Pmax	U3	UINT32	R	
30:3	AI:28	I1 Maximum ampere demand	0-Imax	U2	UINT32	R	
30:3	AI:29	I2 Maximum ampere demand	0-Imax	U2	UINT32	R	
30:3	AI:30	I3 Maximum ampere demand	0-Imax	U2	UINT32	R	
30:3	AI:31	Present kW import sliding window demand	0-Pmax	U3	UINT32	R	
30:3	AI:32	Present kVA sliding window demand	0-Pmax	U3	UINT32	R	
30:4	AI:33	PF (import) at Max. kVA sliding window demand	0-1000	×0.001	UINT16	R	
30:4	AI:34	V1/V12 Voltage THD	0-9999	×0.1%	UINT16	R	[1] 3-sec value
30:4	AI:35	V2/V23 Voltage THD	0-9999	×0.1%	UINT16	R	[1] 3-sec value
30:4	AI:36	V3/V31 Voltage THD	0-9999	×0.1%	UINT16	R	[1] 3-sec value

Object : Var.	Object : Point	Description	Options/Range[2]	Units[2]	Type	R/W	Notes
30:4	AI:37	I1 Current THD	0-9999	×0.1%	UINT16	R	3-sec value
30:4	AI:38	I2 Current THD	0-9999	×0.1%	UINT16	R	3-sec value
30:4	AI:39	I3 Current THD	0-9999	×0.1%	UINT16	R	3-sec value
30:4	AI:40	I1 Current TDD	0-1000	×0.1%	UINT16	R	3-sec value
30:4	AI:41	I2 Current TDD	0-1000	×0.1%	UINT16	R	3-sec value
30:4	AI:42	I3 Current TDD	0-1000	×0.1%	UINT16	R	3-sec value

NOTES:

[1] When the 4LN3, 3LN3 or 3BLN3 wiring mode is selected, the voltages will be line-to-neutral; for any other wiring mode, they will be line-to-line voltages.

[2] All analog input points except of harmonics are 1-second average values. For volts, amps and power scales and units, refer to Section 4 "Data Scales and Units". For analog input scaling formulas and examples, see Section 2.2.6, " Scaling Analog Input Objects".

3.2 Binary Inputs - Basic Set

Object : Var.	Object : Point	Description	Range	Units	Type	R/W	Notes
01:1	BI:0	Relay #1 status	0-1			R	
01:1	BI:1	Relay #2 status	0-1			R	
01:1	BI:16	Status input #1	0-1			R	
01:1	BI:17	Status input #2	0-1			R	
01:1	BI:48	Battery status	0-1			R	

3.3 Binary Counters - Basic Set

Object : Var.	Object : Point	Description	Range	Units	Type	R/W	Notes
20:5	BC:0	kWh import	$0\text{-}10^9\text{-}1$	kWh	UINT32	R	
20:5	BC:1	kWh export	$0\text{-}10^9\text{-}1$	kWh	UINT32	R	
20:5	BC:2	kvarh net	$0\text{-}10^9\text{-}1$	kvarh	UINT32	R	
20:5	BC:3	kVAh	$0\text{-}10^9\text{-}1$	kVAh	UINT32	R	
20:5	BC:4	kvarh import	$0\text{-}10^9\text{-}1$	kvarh	UINT32	R	
20:5	BC:5	kvarh export	$0\text{-}10^9\text{-}1$	kvarh	UINT32	R	

3.4 Frozen Binary Counters

Object : Var. [1]	Object : Point	Description	Range	Units	Type	R/W	Notes
		Total Energies – Basic Set					
21:var	FBC:0	kWh import	0-10^9-1	kWh	UINT32	R	
21:var	FBC:1	kWh export	0-10^9-1	kWh	UINT32	R	
21:var	FBC:2	kvarh net	0-10^9-1	kvarh	UINT32	R	
21:var	FBC:3	kVAh	0-10^9-1	kVAh	UINT32	R	
21:var	FBC:4	kvarh import	0-10^9-1	kvarh	UINT32	R	
21:var	FBC:5	kvarh export	0-10^9-1	kvarh	UINT32	R	
		Counters – Extended Set					
21:var	FBC:35328	Counter #1	0-999,999		UINT32	R	
21:var	FBC:35329	Counter #2	0-999,999		UINT32	R	
21:var	FBC:35330	Counter #3	0-999,999		UINT32	R	
21:var	FBC:35331	Counter #4	0-999,999		UINT32	R	
		Total Energies - Extended Set					
21:var	FBC:38656	kWh import	0-10^9-1	1 kWh	UINT32	R	
21:var	FBC:38657	kWh export	0-10^9-1	1 kWh	UINT32	R	
21:var	FBC:38658	Not used			UINT32	R	
21:var	FBC:38659	Not used			UINT32	R	
21:var	FBC:38660	kvarh import	0-10^9-1	1 kvarh	UINT32	R	
21:var	FBC:38661	kvarh export	0-10^9-1	1 kvarh	UINT32	R	
21:var	FBC:38662	Not used			UINT32	R	
21:var	FBC:38663	Not used			UINT32	R	
21:var	FBC:38664	kVAh total	0-10^9-1	1 kVAh	UINT32	R	
		Phase Energies - Extended Set					
21:var	FBC:38912	kWh import L1	0-10^9-1	1 kWh	UINT32	R	
21:var	FBC:38913	kWh import L2	0-10^9-1	1 kWh	UINT32	R	
21:var	FBC:38914	kWh import L3	0-10^9-1	1 kWh	UINT32	R	
21:var	FBC:38915	kvarh import L1	0-10^9-1	1 kvarh	UINT32	R	
21:var	FBC:38916	kvarh import L2	0-10^9-1	1 kvarh	UINT32	R	
21:var	FBC:38917	kvarh import L3	0-10^9-1	1 kvarh	UINT32	R	
21:var	FBC:38918	kVAh total L1	0-10^9-1	1 kVAh	UINT32	R	
21:var	FBC:38919	kVAh total L2	0-10^9-1	1 kVAh	UINT32	R	
21:var	FBC:38920	kVAh total L3	0-10^9-1	1 kVAh	UINT32	R	

NOTE

[1] For object variation, see DNP Options setup (see Section 3.9).

3.5 Analog Inputs, Binary Inputs and Counters – Extended Set

Object : Var.	Object : Point	Description	Options/Range[3]	Units[3]	Type	R/W	Notes
30:4	AI:32768	**None**	0		UINT16	R	
		Digital Inputs DI1-DI2				R	
01:1	BI:34304	DI1	0-1			R	
01:1	BI:34305	DI2	0-1			R	
		Relay Outputs RO1-RO2				R	
01:1	BI:34816	Relay #1	0-1			R	
01:1	BI:34817	Relay #2	0-1			R	
		Counters					
20:5	BC:35328	Counter #1	0-999,999		UINT32	R	
20:5	BC:35329	Counter #2	0-999,999		UINT32	R	
20:5	BC:35330	Counter #3	0-999,999		UINT32	R	
20:5	BC:35331	Counter #4	0-999,999		UINT32	R	
		1-Cycle Phase Values					
30:3	AI:35840	V1/V12 Voltage	0-Vmax	U1	UINT32	R	[1]
30:3	AI:35841	V2/V23 Voltage	0-Vmax	U1	UINT32	R	[1]
30:3	AI:35842	V3/V31 Voltage	0-Vmax	U1	UINT32	R	[1]
30:3	AI:35843	I1 Current	0-Imax	U2	UINT32	R	
30:3	AI:35844	I2 Current	0-Imax	U2	UINT32	R	
30:3	AI:35845	I3 Current	0-Imax	U2	UINT32	R	
30:3	AI:35846	kW L1	-Pmax-Pmax	U3	INT32	R	
30:3	AI:35847	kW L2	-Pmax-Pmax	U3	INT32	R	
30:3	AI:35848	kW L3	-Pmax-Pmax	U3	INT32	R	
30:3	AI:35849	kvar L1	-Pmax-Pmax	U3	INT32	R	
30:3	AI:35850	kvar L2	-Pmax-Pmax	U3	INT32	R	
30:3	AI:35851	kvar L3	-Pmax-Pmax	U3	INT32	R	
30:3	AI:35852	kVA L1	0-Pmax	U3	UINT32	R	
30:3	AI:35853	kVA L2	0-Pmax	U3	UINT32	R	
30:3	AI:35854	kVA L3	0-Pmax	U3	UINT32	R	
30:4	AI:35855	Power factor L1	-1000-1000	×0.001	INT16	R	
30:4	AI:35856	Power factor L2	-1000-1000	×0.001	INT16	R	
30:4	AI:35857	Power factor L3	-1000-1000	×0.001	INT16	R	
30:4	AI:35858	V1/V12 Voltage THD	0-9999	×0.1%	UINT16	R	[2] 0.2-sec value
30:4	AI:35859	V2/V23 Voltage THD	0-9999	×0.1%	UINT16	R	[2] 0.2-sec value
30:4	AI:35860	V3/V31 Voltage THD	0-9999	×0.1%	UINT16	R	[2] 0.2-sec value
30:4	AI:35861	I1 Current THD	0-9999	×0.1%	UINT16	R	0.2-sec value
30:4	AI:35862	I2 Current THD	0-9999	×0.1%	UINT16	R	0.2-sec value

NOTES:

1 When the 4LN3, 4LL3, 3LN3, 3LL3, 3BLN3 or 3BLL3 wiring mode is selected, the voltages will be line-to-neutral; for any other wiring mode, they will be line-to-line.

2 When the 4LN3, 3LN3 or 3BLN3 wiring mode is selected, the voltages will be line-to-neutral; for any other wiring mode, they will be line-to-line voltages.

3 For volts, amps, power and frequency scales and units refer to Section 4 ”Data Scales and Units”. For analog input scaling formulas and examples, see Section 2.2.6, “ Scaling Analog Input Objects”.

3.6 Factory Device Settings and Identification

10:2(read) 12:1(write)	B0:79 CROB:79	EEPROM fault	0/1 = state OFF/ON			R/W	2
Remote Relay Control							
10:2(read) 12:1(write)	BO:80 CROB:80	Relay #1 Force operate/Force release/Normal	0/1 = state OFF/ON			R/W	4
10:2(read) 12:1(write)	BO:81 CROB:81	Relay #2 Force operate/Force release /Normal	0/1 = state OFF/ON			R/W	4

NOTES:

1 The following restriction should be noted when using object 12 to control the listed points.

- The Count byte is ignored.
- The Control Code byte is checked:
  - Pulse On (1) is valid for all points; other codes are invalid and will be rejected.
- The On Time and Off Time fields are ignored.
- The status byte in the response will reflect the success or failure of the control operation:
  - Request Accepted (0) will be returned if the command was accepted;
  - Request not Accepted due to Formatting Errors (3) is returned if the Control Code byte was incorrectly formatted or if an invalid code was present in the command;
  - Control Operation not Supported for this Point (4) is returned if the Control Point was out of control.

2 The alarm indication points indicate possible problems with the device hardware or setup configuration. The hardware problems are indicated by the appropriate points, which are set whenever the instrument fails self-test diagnostics, or in the event of loss of power. The dedicated binary point indicates the setup configuration problems, which is set when either

configuration register is corrupted. In this event, the instrument will use the default configuration. The configuration corrupt bit may also be set as a result of the legal changes in the setup configuration since the instrument might implicitly change or clear other setups if they are affected by the changes made.

Issuing the Direct-Operate, SBO/Operate or Direct-Operate-No-Acknowledge command using the Control-Relay-Output-Block object (with the code operation Latch-Off) to points 64-75 can reset hardware fault points. The configuration corrupt status point is also reset automatically when you change setup either via the front panel or through communications.

The following restrictions should be noted when using Object 12 to control the listed points:

- The Count byte is ignored.
- The Control Code byte is checked:
  - Latch Off is valid for all points; other codes are invalid and will be rejected.
- The On Time and Off Time fields are ignored.
- The status byte in the response will reflect the success or failure of the control operation:
  - Request Accepted (0) is returned if the command was accepted;
  - Request not Accepted due to Formatting Errors (3) is returned if the Control Code byte was incorrectly formatted or if an invalid Code was present in the command.

[3] These self-check alarms are doubled with the corresponding internal indication bits.

[4] To manually operate a relay, use the Direct-Operate, SBO/Operate or Direct-Operate-No-Acknowledge command to point 80 or 81 of the Control-Relay-Output-Block object with the Control Code value Latch On. To manually release Relay #1, use the Direct-Operate, SBO/Operate or Direct-Operate-No-Acknowledge command to point 80 or 81 of the Control-Relay-Output-Block object with the Control Code value Latch Off.

To operate a relay in pulse mode with the Pulse On or Pulse Off control code, put the relay in pulse mode and select a required pulse polarity via the Relay Outputs setup (use the supplemental PAS software to change the relay properties). The actual pulse width will be taken from the On Time/Off Time fields of the Control-Relay-Output-Block object.

The following restrictions should be noted when using object 12 to control the listed points:

- The Count byte is ignored.
- The Control Code byte is checked:
  - Pulse On, Pulse Off, Latch On (Pulse On/Close) and Latch Off (Pulse On/Trip) are valid for all points; other codes are invalid and will be rejected;
  - Clear sub-field is valid; other sub-fields are ignored.
- The On Time specifies in ms the amount of time the digital point is to be turned on. The minimal value of the On Time is 500 ms and the actual value may differ from the specified value by up to 10 ms.
- The Off Time specifies in ms the amount of time the digital point is to be turned off. The minimal value of the Off Time is 500 ms and the actual value may differ from the specified value by up to 10 ms.
- The Status byte in the response reflects the success or failure of the control operation:
  - Request Accepted (0) will be return if the command was accepted;
  - Request not Accepted due to Formatting Errors (3) will be returned if the Control Code byte was incorrectly formatted or an invalid Code was present in the command;
  - Control Operation not Supported for this Point (4) will be returned if the Control Point was out of control.

3.8 Device Setup

	AO:1155-AO:1157	**DNP Class 0 Point Range 2**					
		…					
	AO:1245-AO:1247	**DNP Class 0 Point Range 32**					

NOTES:

1 The default variation indicates the variation that is used for requests with qualifier code 06 (variation 0) when no specific variation is requested by a master station.

2 The sum of all points allocated for change event objects should not exceed 64. If no points are allocated for change events, the report-by-exception mode is not supported.

3 Scaling 16-bit AI objects (see Section 2.2.6) lets accommodate 32-bit analog input readings to 16-bit object format. Scaling is enabled by default. It is not applied to 32-bit AI objects (object 30, variations 1 and 3).

4 The Select Before Operate command causes the device to start a timer. The following Operate command must be sent before the value specified by the Select/Operate Timeout expires.

[5] The device requests time synchronization by bit 4 in the first octet of the internal indication word being set when the time specified by the Time Sync Period elapses. The master should synchronize the time in the device by writing the Time and Date object. The meter does not request time synchronization if the Time Sync Period is set to 0.

[6] Scaling 16-bit Binary Counters (see Section 2.2.7) allows changing a counter unit in powers of 10 to accommodate a 32-bit counter value to 16-bit BC object format.

4 Data Scales and Units

Code	Condition	Value/Range	Notes
Data Scales			
Vmax		Voltage scale × PT Ratio, V	2
Imax		Current scale (2A/10A) × CT Ratio = CT Primary current × 2, A	1, 3
Pmax	Wiring 4LN3, 3LN3, 3BLN3	Vmax × Imax × 3, W	4
	Wiring 4LL3, 3LL3, 3BLL3, 3OP2, 3OP3, 3DIR2	Vmax × Imax × 2, W	
Fmax	Nominal frequency 50 or 60 Hz	100 Hz	
AImin AImax	+/-1mA	AImin = -AI full scale × 2 AImax = AI full scale × 2	
	0-20mA	AImin = AI zero scale AImax = AI full scale	
	4-20mA	AImin = AI zero scale AImax = AI full scale	
	0-1mA	AImin = AI zero scale AImax = AI full scale	
Data Units			
U1	PT Ratio = 1	0.1V	
	PT Ratio > 1	1V	
U2		0.01A	
U3	PT Ratio = 1	1W/Var/VA	
	PT Ratio > 1	1kW/kvar/kVA	

1 CT Ratio = CT primary current/CT secondary current

2 The default Voltage scale is 144V (120V +20%). You can change it via the DNP Options setup (see Section 3.9) or via the Device Options setup in PAS.

3 The default Current scale is 2 × CT secondary current (2 × 1A or 2 × 5A depending on the order).

4 Pmax is rounded to whole kilowatts. With PT=1.0, if Pmax is greater than 9,999,000 W, it is truncated to 9,999,000 W.

5 Data Formats

Format Code	Value	Description	Notes
Wiring Mode			
F1	0	3OP2 - 3-wire open delta using 2 CTs (2 element)	
	1	4LN3 - 4-wire WYE using 3 PTs (3 element), line-to-neutral voltage readings	
	2	3DIR2 - 3-wire direct connection using 2 CTs (2 element)	
	3	4LL3 - 4-wire WYE using 3 PTs (3 element), line-to-line voltage readings	
	4	3OP3 - 3-wire open delta using 3 CTs (2 1/2 element)	
	5	3LN3 - 4-wire WYE using 2 PTs (2 1/2 element), line-to-neutral voltage readings	
	6	3LL3 - 4-wire WYE using 2 PTs (2 1/2 element), line-to-line voltage readings	
	8	3BLN3 - 3-wire broken delta using 2 PTs (2 1/2 element), line-to-neutral voltage readings	
	9	3BLL3 - 3-wire broken delta using 2 PTs (2 1/2 element), line-to-line voltage readings	
Instrument Options			
F2	Bit 0=1	120V Option

APPENDIX A DNP Application Messages

The device is a DNP IED responding to external DNP Master requests. Table A-1 describes the PM175 application level responses to external requests, including object variations, functions, codes and qualifiers supported by the device. The object and formats are detailed in the DNP Basic 4 Documentation Set.

Table A-1 Application Responses

Object			Request		Response	
Object	**Variation**	**Description**	**Function Code**	**Qualifier Code**	**Function Code**	**Qualifier Code**
01	0	Binary Input (responds with the default variation 4)	1	B	129	01
01	1	Single Bit Binary Input	1	A	129	C
01	2	Binary Input with Status	1	A	129	C
02	0	Binary Input Change	1	06	129	17,28
02	1	Binary Input Change without Time	1	07,08	129	17,28
02	2	Binary Input Change with Time	1	07,08	129	17,28
10	0	Binary Output (responds with variation 1)	1	B	129	01
10	1	Binary Output	1	A	129	C
10	2	Binary Output Status	1	A	129	C
12	1	Control Relay Output Block	3,4,5	A	129	C
12	1	Control Relay Output Block	6	A	None	N/A
20	0	Binary Counter (responds with the default variation 4)	1, 7,9, 8,10	B B B	129 129 129	01 N/R N/A
20	1	32-bit Binary Counter	1	A	129	C
20	2	16-bit Binary Counter	1	A	129	C
20	5	32-bit Binary Counter without flag	1	A	129	C
20	6	16-bit Binary Counter without flag	1	A	129	C
21	0	Frozen Counter (responds with the default variation 4)	1	B	129	01
21	1	32-bit Frozen Counter				
21	2	16-bit Frozen Counter				
21	5	32-bit Frozen Counter with time of freeze				
21	6	16-bit Frozen Counter with time of freeze				
21	9	32-bit Frozen Counter without flag				
21	10	16-bit Frozen Counter without flag				
22	0	Counter Change Event (responds with the default variation 4)	1	06	129	17
22	1	32-bit Counter Change Event without Time	1	07,08	129	17
22	2	16-bit Counter Change Event without Time	1	07,08	129	17
22	5	32-bit Counter Change Event with Time	1	07,08	129	17
22	6	16-bit Counter Change Event with Time	1	07,08	129	17
30	0	Analog Input (responds with the default variation 4)	1	B	129	01
30	1	32-bit Analog Input	1	A	129	C
30	2	16-bit Analog Input	1	A	129	C
30	3	32-bit Analog Input without flag	1	A	129	C
30	4	16-bit Analog Input without flag	1	A	129	C
32	0	Analog Change Event (responds with the default variation 4)	1	06	129	17
32	1	32-bit Analog Change Event without Time	1	07,08	129	17
32	2	16-bit Analog Change Event without Time	1	07,08	129	17
32	3	32-bit Analog Change Event with Time	1	07,08	129	17
32	4	16-bit Analog Change Event with Time	1	07,08	129	17
40	0	Analog Output Status (responds with variation 2)	1	B	129	01
40	1	32-bit Analog Output Status	1	A	129	C
40	2	16-bit Analog Output Status	1	A	129	C
41	1	32-bit Analog Output Block	3,4,5	A	129	C
41	2	16-bit Analog Output Block	3,4,5	A	129	C
41	1	32-bit Analog Output Block	6	A	None	N/A
41	2	16-bit Analog Output Block	6	A	None	N/A

Object			Request		Response	
Object	**Variation**	**Description**	**Function Code**	**Qualifier Code**	**Function Code**	**Qualifier Code**
50	1	Time and Date [1]	1,2	A	129	C
60	1	Class 0	1	B	129	01
60	2	Class 1	1	06,07,08	129	17
60	3	Class 2	1	06,07,08	129	17
60	4	Class 3	1	06,07,08	129	17
80	1	Internal indication [2]	2	D	129	
N/A	N/A	Cold Restart [3] (respond Obj. 52:2)	13	N/A	129	07
N/A	N/A	Delay Measurement (respond Obj. 52:2)	23	N/A	129	07

[1] For this object only point index 0 is allowed.

[2] For this object only point index 7 is allowed.

[3] Responds with time object 50 variation 2 indicating time until device availability.

[4] The default object variation used in device responses to master requests with no specific variation specified and in Class 1, Class 2 and Class 3 responses can be selected via the DNP Options Setup (see Section 3.9, DNP Protocol setup).

Qualifier Hex Codes for each category:
A - 00,01,03,04,07,17,27,08,18,28
B - 06 only
C - Qualifier echo
D - 00,01,03,04,17,27,18,28

N/A - Not Available

N/R - Null Response

Appendix B DNP Device Profile

DNP3

DEVICE PROFILE DOCUMENT

This document must be accompanied by a table having the following headings:

Object Group | Request Function Codes | Response Function Codes

Object Variation | Request Qualifiers | Response Qualifiers

Object Name (optional)

Vendor Name: SATEC Ltd.

Device Name: Powermeter Series PM175

Highest DNP Level Supported:	Device Function:
For Requests L2	☐ Master ■ Slave
For Responses L2	

Device supports READ of each object using either all points (Qualifier = 6) or specific points using qualifier defined in Basic 4 Documentation Set: 00, 01, 03, 04, 07, 17, 27, 08, 18, 28. Control Relay Block requires specific parameters described in this manual. Treats range field of qualifier 07 and 08 to mean point range [0…N-1].

Maximum Data Link Frame Size (octets):	Maximum Application Fragment Size (octets):
Transmitted 292	Transmitted 2048
Received 292	Received 249

Maximum Data Link Retries:	Maximum Application Layer Retries:
■ None	■ None
☐ Fixed at_____	☐ Configurable, range ____ to _____
☐ Configurable, range ___ to_____	(Fixed is not permitted)

Requires Data Link Layer Confirmation:

■ Never

☐ Always

☐ Sometimes If 'Sometimes', when? _____

☐ Configurable If 'Configurable', how? _____

Requires Application Layer Confirmation:

☐ Never

☐ Always (not recommended)

■ When reporting Event Data (Slave devices only)

☐ When sending multi-fragment responses (Slave devices only)

☐ Sometimes If 'Sometimes', when? _____

☐ Configurable If 'Configurable', how? _____

Timeouts while waiting for:

Data Link Confirm ■ None ☐ Fixed at _____ ☐ Variable ☐ Configurable

Complete Appl. Fragment ■ None ☐ Fixed at _____ ☐ Variable ☐ Configurable

Application Confirm ☐ None ■ Fixed at _5 sec__ ☐ Variable ☐ Configurable

Complete Appl. Response ■ None ☐ Fixed at _____ ☐ Variable ☐ Configurable

Others

Timeouts between fragments of the multi-fragment responses. Configurable:

50-500 ms (50 ms by default).

_____

Attach explanation if 'Variable' or 'Configurable' was checked for any timeout

Sends/Executes Control Operations:

WRITE Binary Outputs	■ Never	☐ Always	☐ Sometimes	☐ Configurable
SELECT/OPERATE	☐ Never	■ Always	☐ Sometimes	☐ Configurable
DIRECT OPERATE	☐ Never	■ Always	☐ Sometimes	☐ Configurable
DIRECT OPERATE - NO ACK	☐ Never	■ Always	☐ Sometimes	☐ Configurable
Count > 1	■ Never	☐ Always	☐ Sometimes	☐ Configurable
Pulse On	☐ Never	☐ Always	■ Sometimes[1,4]	☐ Configurable
Pulse Off	■ Never	☐ Always	☐ Sometimes[4]	☐ Configurable
Latch On	☐ Never	☐ Always	■ Sometimes[2]	☐ Configurable
Latch Off	☐ Never	☐ Always	■ Sometimes[3]	☐ Configurable
Queue	■ Never	☐ Always	☐ Sometimes	☐ Configurable
Clear Queue	☐ Never	☐ Always	■ Sometimes[4]	☐ Configurable

♦ **Select timeout period is configurable: 2s to 30s**

[1] used to activate the *Reset* function associated with points 0 to 21

[2, 3, 4] used to control Relays associated with points 80 to 81

[3] used to reset the self-check alarm registers associated with points 64 to 75

Reports Binary Input Change Events when no specific variation requested:

☐ Never

☐ Only time-tagged

☐ Only non-time-tagged

■ Configurable to send both, one or the other (attach explanation)

Configurable to send one or the other.

Reports time-tagged Binary Input Change Events when no specific variation requested:

☐ Never

■ Binary Input Change With Time

☐ Binary Input Change With Relative Time

☐ Configurable (attach explanation)

Device Profile Document (continued)

Sends Unsolicited Responses: ■ Never ☐ Configurable (attach explanation) ☐ Only certain objects ☐ Sometimes (attach explanation) ☐ ENABLE/DISABLE UNSOLICITED Function codes supported	Sends Static Data in Unsolicited Responses: ■ Never ☐ When Device Restarts ☐ When Status Flags Change No other options are permitted.
Default Counter Object/Variation: ☐ No Counters Reported ■ Configurable (attach explanation) Counters requested with variation 0 are responded with the default variation specified for the Counter object in the DNP Options Setup. ☐ Default Object ☐ Point-by-point list attached	Counters Roll Over at: ☐ No Counters Reported ☐ Configurable (attach explanation) ☐ 16 Bits ☐ 32 Bits ☐ Other Value Counters ■ Point-by-point list attached See Sections 3.3-3.5
Sends Multi-Fragment Responses: ☐ Yes ■ No
